

BRITMILK

HEIFER PLUS

BIO-START

Britmilk HEIFER PLUS is a top performing calf milk replacer rich in quality proteins designed for bucket feeding and most automatic feeders NOT requiring a free flow powder.

Analysis:

Oil	20%	Vitamin A	40,000iu/kg
Protein	26%	Vitamin D ₃	5,000iu/kg
Fibre	0%	Vitamin E	300iu/kg
Ash	7.0%	Selenium	0.3mg/kg

BIO-START: Colostrum powder rich in specific proteins. Also contains probiotics and pre-biotics to help maintain a healthy balance of beneficial bacteria in the intestine. This unique triple action will help to ensure faster economic growth, resulting in more profit.

MIXING & FEEDING

Enhanced performance can be achieved by increasing the concentration of milk replacer in order to meet specific targets for live weight gain.

Mix 100gms of powder to make 1 litre of mixed milk replacer (ie. 450gms to 4 litres of water to give 4.5 litres of mixed milk replacer)

Enhanced performance

Mix 145gms of powder to make 1 litre of mixed milk replacer (ie 650gms to 3.8 litres of water to give 4.5 litres of mixed milk replacer)

Do not mix in hot water, feed at 39°C - 40°C

FEEDING GUIDELINES FOR TWICE & ONCE A DAY

It is vital for the health of the calf to receive high quality colostrum (10% of body weight) within the first 6 hours of birth. Continue to feed colostrum for 3 – 4 days.

Age in Days	Twice a day am (litres) pm		Once a day am or pm (litres)
0-4 days	Colostrum		Colostrum
5-12 days	2	2	Feed twice a day for the first 28 days
13-20 days	2.5	2.5	
21-28 days	3	3	
28 days +	3	3	3 – 3.5*

Calves under 40kg should have quantities reduced by 15%.

***Once a day feeding after 28 days - the concentration should increase to 200gms powder in every litre of mixed milk replacer.**

During periods of cold weather powder intake may need to increase between 50 – 125g per calf per day.

Fresh water and pellets/mixture must be available at all times.

Bought in calves: should be rested for 6 hours. First feed should be 3 litres of Britmilk Hydrolyte (electrolytes/probiotics/vitamins) before starting milk replacer.

AUTOMATIC MACHINE FEEDING SYSTEMS (NOT requiring a free flow powder)

MIXING RATE: Calibrate feeder between 113g - 145g per litre of mixed milk replacer.

FEEDING: Best results are obtained by feeding at 39°C.

After 5 days on machine fresh water calf pellets/mixture and straw should be made available at all times.

Calves should only be weaned when eating 1kg of solid food per day.

Ask your Distributor for further details on Britmilk Calf Products.
