# CALF PRIME

+

**BIO-START**

*When only the best will do.'*

**Britmilk CALF PRIME** contains quality milk proteins, based from skim milk powder. Its specially chosen oil and fats plus minerals/vitamins supplement makes it the number one choice for young calves.

### **Analysis:**

Oil	18%	Vitamin A	25,000iu/kg
Protein	22%	Vitamin D <sub>3</sub>	5,000iu/kg
Fibre	0.0%	Vitamin E	300iu/kg
Ash	7.0%	Selenium	0.25mg/kg

**BIO-START:** Colostrum powder rich in specific proteins. Also contains probiotics to help maintain a healthy balance of beneficial bacteria in the intestine. This unique double action will help to ensure faster economic growth, resulting in more profit.

## **MIXING & FEEDING**

### **DO NOT MIX IN WATER ABOVE 48°C**

To make 1 litre of mixed milk replacer add 125gms of powder to 875mls of water and feed at 40°C.

### **For Enhanced Performance**

Mix 140gms of powder to make 860ml of water to make one litre of milk replacer and feed at 40°C.

## **FEEDING GUIDELINES FOR ONCE & TWICE A DAY**

It is vital for the health of the calf to receive high quality colostrum (10% of body weight) within the first 6 hours of birth. Continue to feed colostrum for 3 – 4 days.

Age in Days	Twice a day am (litres) pm		Once a day am or pm (litres)
0-4 days	Colostrum		Colostrum
5-12 days	2	2	Feed twice a day for first 28 days
13-20 days	2.5	2.5	
21-28 days	3	3	
28 days+	3	3	3 – 3.5*

Calves under 40kg should have quantities reduced by 15%

**\*Once a day feeding after 28 days:-** the concentration should increase to 200gms powder in every litre of mixed milk replacer.

**During periods of cold weather powder intake may need to increase between 50 – 125g per calf per day.**

Fresh water and pellets/mixture must be available at all times.

**Bought in calves:** should be rested for 6 hours. First feed should be 3 litres of Britmilk Hydrolyte (electrolytes/probiotics/vitamins) before starting milk replacer.

## **AUTOMATIC/COMPUTERISED MACHINE FEEDING SYSTEMS** (**NOT** requiring a free flow powder)

**MIXING RATE:** In order to meet specific targets for liveweight gain, calibrate feeder between 125-140g to make one litre of finished milk.

**FEEDING:** Feed at 40°C.

After 5 days on machine, fresh water/calf pellets and straw should be made available at all times.

Calves should only be weaned when eating 1.5kg of solid foods per day.
