

PREMIER

PREMIER PLATINUM ENERGISED CALF MILK

PREMIER PLATINUM is a top performing calf milk replacer based on **low heat Skim** and contains **100% All Milk Protein** with **low osmolality**. Quality oils/fats (including dairy fat) are **fully homogenised** with each fat molecule **less than 2 microns** in diameter and **encapsulated** with milk solids for maximum digestibility. Suitable for bucket feeding and most automatic feeders **NOT** requiring a free flowing powder.

Analysis:

Oil	22%	Vitamin A	25,000iu/kg
Protein	20%	Vitamin D3	5,000iu/kg
Lysine	2.1%		
Fibre	0%	Vitamin E	300iu/kg
Ash	6.5%	Selenium	0.25mg/kg

Health Package

BIO-START: Colostrum powder (egg powder) rich in specific proteins. Also contains probiotics including live yeast and pre-biotics (m.o.s) to help maintain a healthy balance of beneficial bacteria in the intestine and enhance the immune system.

BIO-FATE: Esterified short chain fatty acids replicating the fatty acid profile of cows milk. SCFA have anti-bacterial properties and also help to enhance the development of gut villi for better nutrient absorption with improved feed efficiency

BIOCOX+: is a blend of essential oils and plant extracts with its primary role to control the growth of undesirable organism and also enhance the immune system.

BIO-GEL (gut stabilizer) – for improved gut health.

MIXING & FEEDING - DO NOT MIX IN WATER ABOVE 48°C

To make 1Ltr of mixed milk replacer add 135gms of powder to 865mls of water and feed at 40°C

For Enhanced Performance - Mix 150gms of powder in 850ml of water to make one Litre of milk replacer and feed at 40°C

Feeding guidelines

It is vital for the health of the calf to receive high quality colostrum (10% of body weight) within the first 6 hours of birth. Continue to feed colostrum for 3 – 4 days

Age in days	Twice a day AM (Ltrs) PM	*Once a day AM or PM Ltrs
0-4 days	Colostrum	Colostrum
5 – 10 days	2.5/3 2.5/3	Feed twice a day for first 28 days
11 + days	3/4.0 3/4.0	
		3.5/4.0

Calves under 40kg should have quantities reduced by 15%.

***Once a day feeding after 28 days:- the concentration should increase to 200gms powder in every litre of mixed milk replacer.**

During periods of cold weather powder intake may need to increase between 50 – 125g per calf per day.

Fresh water and pellets/mixture must be available at all times

AUTOMATIC/COMPUTERISED MACHINE FEEDING SYSTEMS - (NOT requiring a free flow powder)

MIXING RATE: In order to meet specific targets for liveweight gain, calibrate feeder between 135-150g to make one litre of **finished** milk.

After 5 days on machine, fresh water/calf pellets and straw should be made available at all times

Calves should only be weaned when eating 1.5 to 2kg of solid foods per day for a period of at least 7 days.
